Admissions Committee
M.Sc. Data Analytics (International Master)
University of Hildesheim

Motivation Letter: M.Sc. Data Analytics (International Master)

Dear Members of the Admissions Committee,

I am writing to apply for the M.Sc. Data Analytics (International Master) at the University of Hildesheim. I graduated in July 2025 with a B.Sc. in Computer Science from Pharos University in Alexandria, Excellent with Honors (CGPA 3.88 out of 4.00, 92.13%). I want to build my career in data science, statistics and machine learning, and this master's is the next step for me.

My interest in data started in my first year, in Introduction to Data Sciences. I liked that the answer was not written in the code. It was hidden in the data, and you had to find it. In 2023 I joined WorldQuant University's online data science program, where I worked on real, messy datasets: cleaning them with pandas, exploring them with plots and heatmaps, and building my first machine learning pipelines. Around the same time I took IBM's data science courses and AWS's machine learning course. At university my best grades came in the courses closest to this field: Probability and Statistics (97), Linear Algebra (95), Data Science Methodology (94), Machine Learning (93) and Introduction to Data Sciences (93).

Two projects taught me the most. In my graduation project, BloomTech, our team built a smart agriculture system that detects plant diseases from photos, monitors soil and water with solar powered sensors, and helps farmers through a mobile app. Getting the disease detection above 90% accuracy on more than 1,000 test images showed me that a model is only as good as the data behind it. In another project I predicted Bitcoin prices and compared ARIMA, Random Forest and LSTM models. The LSTM worked best, but the more useful lesson was learning to test a time series model honestly, on data it has never seen. The project received Top Project Recognition at our faculty showcase.

After graduating, I worked for a year as a Teaching Assistant at my faculty. Explaining the same idea to many students in different ways made my own understanding much more solid. Before that I did internships in Node.js development at Route and in embedded systems at ITI, and worked for six months as an international account advisor for Vodafone UK at _VOIS, where I learned to communicate clearly in English under pressure. At university I also led teams as Head of Operations at IEEE PUA and Head of HR at GDSC PUA.

The International Master in Data Analytics fits me very well. It is built around exactly what I want to get better at: machine learning, statistics and working with real data. I also like that it is close to the university's machine learning research lab, so the courses are not only theory. Studying in English in an international group suits me, since my whole bachelor's degree was taught and assessed in English.

After the master's, I would like to work as a data scientist or machine learning engineer. I am especially interested in using data in agriculture and health, two areas where I have already seen, in BloomTech and in my Healthcare Database Systems course, how much good data can change real decisions.

I know the program is demanding, and I am ready for that. Thank you for considering my application. I would be very happy to provide any further information.

Sincerely,

Rodayna Emad Mohamed Abdelkader Abdelmawla
